Coffee Machine Instructions

- Firstly - Fill the Water Container at the back of machine
- Turn Machine On – see button on top of machine
- Lift the Silver Leaver and check last re-fill has dropped (see photo 1)
- Close down Silver leaver and place a cup in the holder
- Press the bottom button at the front of the machine (see photo 2 – looks like a shower nozzle) This cleans the machine ready for use.
- Place your coffee cup in the holder, you are ready to go.

Coffee Machine Instructions -2

- Select the coffee pod flavour from the refill box you want, lift the silver lever up and insert refill into the top of the machine .
- The pods must be inserted into the top of the machine in the correct way, top of pod facing the back of the machine. (See photo 3 below)
- It is also important the pod is correctly positioned when you lower the silver lever as you insert the pod. It can be tricky to get it right and the lever needs to come down quickly after insertion. It's a bit like loading a shot gun cartridge into the barrel chamber. If its not correctly inserted into the chamber you will have a problem. Take the time to get it right.

Coffee Machine Instructions -3

- Close down the silver lever ensuring the pod is held in the correct position. The silver lever Must be pressed down firmly but not too hard before pressing the coffee cup button.
- Once the coffee pod is loaded correctly into the chamber, you are ready to make your cappuccino.
- Now press the coffee cup button size that suits your requirements.
- PLEASE NOTE ONLY ALDI COFFEE PODS ARE TO BE USED AS USE OF WOOLIES OR ANY OTHER BRAND WILL VOID THE WARRANTY AND WILL COST \$89 FOR A NEW ONE.

Cleaning of the Milk Frothier

Coffee Machine Instructions - 4

- Froth your milk.
- Please note there are two spindle options, one is on the spindle in the bottom and centre of the frothier and the other is held on the lid of the frothier.
- I avoid the spring loaded spindle as this tends to over froth the milk. If you chose the spring spindle you must use less milk.
- Please ensure the one you are not using is always placed in the holder in the lid at all times to avoid loss.
- The on / off switch is on the side of the frothier and must be placed in the base holder correctly to operate.
- Please observe the filling level instructions on the inside of the frothier to avoid spill over. These are hard to see so look closely.

Coffee Machine Instructions - 5

- Cleaning the coffee machine and Milk Frothier.
- Please clean the Milk frothier after every use, this will make it easier to keep clean especially when you leave the apartment as it is important it is left clean for the next guests. PLEASE NOTE IT MUST NO BE SUBMERGED IN WATER OR PLACED OR CLEANED IN THE DISHWASHER. IT MUST BE HAND WASHED.
- you will note from the photo below the front compartment pulls out and allows you to empty the used coffee pods and also the fluid build up from the operation of the machine over several uses. Please ensure that these drip chambers are emptied frequently after 2-4 uses as they will eventually overflow onto the bench top and drip down onto the carpet.

Coffee Machine Instructions - 5

- *ENJOY*
